Acres (2016 – 2025 as of today)	2,845,121	131%

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Dry conditions will return to the West Coast on Friday as high pressure shifts east, confining monsoonal moisture to the eastern Great Basin, Southwest, and Colorado. Those areas will see scattered afternoon showers and a mix of wet and dry thunderstorms with gusty outflow winds. California and much of the Pacific Northwest will remain hot and dry, while a dry air mass and gusty westerly winds (25–35 mph) spread across the Pacific Northwest and northern California behind an upper-level trough.

East of the ridge, scattered showers and thunderstorms are expected across the Upper Mississippi Valley and Upper Great Lakes, with localized heavy rainfall possible along a cold front. Gusty northwesterly winds will develop behind the front. Wildfire smoke from Minnesota and Canada will continue affecting the Great Lakes and Northeast, reducing temperatures and air quality. Showers are also expected across the Mid-Atlantic and parts of Florida, while Texas begins to dry out except for hot, dry conditions across Deep South Texas.
