Predictive Services Discussion:

Above normal temperatures will combine with breezy southwest to west winds at 12-22 mph with gusts to 30 mph and afternoon relative humidities of 5-15% to elevate fire weather conditions across parts of the northern Great Basin, northeastern California, southeastern Oregon, Northern Rockies, and the western tier of the Dakotas. Extreme heat is expected over the lower elevations of the Intermountain West, Northern Great Plains, and northwestern Great Lakes.

Scattered showers and thunderstorms will continue to work their way northward into parts of the Southwest as monsoonal moisture advances northward out of Mexico. Further to the east, scattered storms are possible over the north central Great Lakes with a better chance of showers and storms over the south central and southeastern U.S. Hot and breezy conditions are expected along the coast of the Carolinas and southward into parts of Florida elevating fire potential once again outside of any thunderstorms that develop. Very warm and mainly dry conditions will continue across the majority of the Great Lakes including northeast Minnesota. Warm temperatures will persist across the eastern Interior of Alaska while cooler conditions prevail over the western half of the state.
