Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A warming trend continues across the West with temperatures rising several degrees above normal. Breezy west winds 12-25 mph with gusts 25-40 mph amid relative humidity of 10-20% will develop through the Cascade gaps, across the Columbia Basin, and Okanogan Valley creating elevated to locally critical conditions. Winds will subside today in the Greater Four Corners, but very dry conditions will persist with minimum relative humidity of 3-12% and very poor overnight recovery below 30%. Isolated mixed wet and dry thunderstorms will develop along the Front Range in the afternoon, with several new ignitions possible along with strong outflow winds. Hot, record-setting temperatures will persist in the Mid-Atlantic and Southeast amid low relative humidity of 25-35%, with scattered showers and thunderstorms moving into the Mid-Atlantic overnight bringing some relief. Showers and thunderstorms will continue in the Midwest, with scattered thunderstorms also expected in Florida. Near normal temperatures are expected in Alaska today as scattered showers develop in south-central Alaska, while moderate trade winds persist in Hawai'i with a decrease in showers.
