Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Warm and dry conditions continue across eastern Arkansas, northern Louisiana, and Mississippi today. Northern California will see a return to above normal temperatures but with lighter winds while southern California sees slight warming but temperatures staying 10 to 15 degrees below normal. Below normal temperatures and widespread precipitation continue across the Great Basin. This is likely being a season ending event for areas of the Great Basin still seeing fire activity. Cool conditions continue across the northern Rockies. Across the Rockies and the Southwest, precipitation shifts to east of the Continental Divide with minimal fire potential through this week. The Northwest will see a return to near normal temperatures as high pressure over the northeast Pacific drifts over the area.
