Predictive Services Discussion:

Isolated to mixed wet and dry thunderstorms will develop across northeast Nevada and northern Utah into the central Rockies. With minimum relative humidity falling to 10-25% across much of the Intermountain West, several new ignitions are possible. New and existing fires may also be fanned by outflow wind gusts up to 50 mph. In addition, breezy west to southwest winds 10-25 mph with gusts 25-45 mph will develop across much of the Inland Northwest and Great Basin creating elevated to locally critical conditions. Isolated mainly wet thunderstorms will develop near the Mexico border in the Southwest, with scattered wet thunderstorms from the central Plains into the Great Lakes. Isolated to scattered showers and thunderstorms will develop in much of the lower Mississippi Valley and Southeast. Above normal temperatures will continue in Alaska with scattered thunderstorms across the western Interior, with isolated thunderstorms for the eastern Interior and North Slope.
