Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Moderate to high-risk significant fire potential is forecast across the southern Plains and Southern Mississippi Valley today with highs reaching 100°F and locally breezy winds, extending over Oklahoma and Arkansas amid RH of 25-30%. Moderate conditions continue across parts of Wyoming and southeastern Montana due to continued dry and breezy conditions. Across the remainder of the west, little to no risk of significant fire potential continues due to cooler conditions and recent rainfall across the northwest.
